

Low carbon economy has to circle more carbon to become resource efficient. *Flex*Methanol brings reindustrialisation for:

- Waste incineration plants
- Paper mills
- Heat driven process
- Fossil power plants

More Sustainability
Less Emissions.

bse methanol
Less emissions, more sustainability

In cooperation with
BASF
We create chemistry

Power-to-Methanol at Small-Scale

*Flex*Methanol

All data provided in this document is non-binding. This data serves informational purposes only and is not guaranteed in any way. Depending on the subsequent individual projects, the relevant data may be subject to changes and will be assessed and determined individually for each project. The desired performance features are only binding if they are expressly agreed upon conclusion of the contract.

Standardized *Flex*Methanol Units

Our Vision

Mankind has always dreamed about endless energy sources produced from air and water which also save the climate. Already today we can tap natural resources like wind and solar power to provide unlimited liquid energy with pure CO₂ and H₂ from water electrolysis. The CO₂ and power from renewable

sources are by far unused resources. Methanol, however, is a product that is already used as fuel. A mass market with premium prices has been established for this application. H₂ will then be electro-chemically produced when power is cheap. In the consequence, *Flex*Methanol with a modularized construction increases the value of power in existing stations by transforming power to a liquid form.

*Flex*Methanol means profitable at all times

*Flex*Methanol will enable economically viable transformation of excess current and off-gas CO₂ into the chemical energy storage in small-scale and delocalized production units. Core of the plant is the tailor-made catalyst of BASF to convert CO₂ without intensive cost prior water-gas-shift reaction.

*Flex*Methanol consists of 4 industrially available process steps (electrolysis, CO₂ scrubbing, methanol synthesis, distillation) as 10 and 20 MW module. The modules are scalable up to 100 MW and thermodynamically interconnected with the

existing asset. This increases the total efficiency of the process. *Flex*Methanol stabilizes the revenues significantly by operating in two ways depending on the power price. If the price is above the internal marginal price the plant feeds into the grid. Otherwise the plant uses the excess current to produce H₂ through discontinuous electrolysis. In a second step, methanol is produced from CO₂ and H₂, thus leading to a valorizing of excess current and CO₂ off-stream gas. In the second process step, BASF's catalysts will be used for the methanol synthesis step. Those catalysts have been further tuned and adapted for this specific process to enable the most efficient production of methanol. Methanol is one of the most important basic chemicals used in numerous industrial applications. For example, it is used in the biodiesel production or blended into gasoline. Did you know that in China, 200 million cars run with methanol blends? How about 150 million cars in Europe with methanol as antiknock agent?

**Ready.
Proven.
Profitable.**

*Flex*Methanol 10 & *Flex*Methanol 20

based on 8,760 hours

Performance

Flexible Operation Flexibility range 10-120 % < 15 seconds	Tailor-made BASF Catalyst High activity / stability, optimized for flexible operation	No tars, no waste Methanol synthesis works on pure gases without any impurities
Highly efficient 55-74 % efficiency on electricity used, heat integration	Low investment CAPEX ≤ 3,000 €/kW	Biodegradable Amines Environmentally friendly and low risk of approval
4 industrial available process steps Reduction of technical and operational risks	No water-gas shift reaction There is no need for capital cost intensive Steam Reforming	Mild process conditions Low pressure 40 bar, 240 °C
Electrolysis preferred to buy by Green Hydrogen Systems	Skid-mounted pre-fabricated Thus short construction time and short start-up time	Gas Loop Operation Complete conversion of carbon to methanol hot-standby

Execution Steps

In cooperation with

bse methanol

- Projekt Developer
- Engineering and process provider
- Balance of the plant

- World leading chemical company
- Pioneer of methanol synthesis
- Largest catalyst company worldwide

www.catalysts.basf.com

bse construction

- Construction of *Flex*Methanol Skid
- Sales of *Flex*Methanol Skids
- *Flex*Methanol Skid Delivery

- high pressure electrolyser
- Provider of high quality 100% sustainable Hydrogen
- high temperature
- containerized modules

MAN Energy Solutions
Future in the making

- DWE® Reactors for the chemical and petrochemical industry
- more than 800 reactor systems since 1955
- holistic approach from process development to world scale commercial reactor systems
